

Access System that Reads up to 10 Fingerprints Proves Beneficial to Builders

The Chamberlain Group, Inc., the single source provider for secure, convenient, quality and stylish products for every access point, was recently honored by Hanley Wood's Building Products Magazine and Ebuild.com for winning a Most Valuable Product Award (MVP) for the LiftMaster® Fingerprint Keyless Entry (Model 379LM), which features the ability to store ten unique fingerprints for secure and controlled access.

To be considered for an MVP Award, Hanley Wood editors judge products on the value they provide to builders and remodelers in terms of quicker installation time, decrease in callbacks, reduction of waste or helping the contractor's business run more efficiently. The product must also have been introduced between January 2007 and January 2008.

Honored as a Most Valuable Product of 2008, the LiftMaster Fingerprint Keyless Entry offers builders the ability to present their customers with an enhanced wireless home access system that is as unique as their fingerprint, with nothing to carry, no lost keys and no codes to remember.

Whether geared toward single family, multi-unit residential or commercial applications, without the physical limitation of wire, the Fingerprint Keyless Entry can be installed by LiftMaster authorized dealers just about anywhere. This provides simplicity and ease of installation during the design and construction phases of a new home or a remodeling project.

"Chamberlain is proud to accept this award. We strive to continue developing innovative products that provide solutions for the building industry," stated Dan Nixa, director of marketing, Chamberlain Professional Products. "Receiving this recognition from Hanley Wood also demonstrates our continuous growth in the builder segment."

Backed by the proven service and support synonymous with all Chamberlain products, along with a one-year warranty, the Fingerprint Keyless Entry system is compatible with all LiftMaster 315MHz residential garage door openers and commercial operators and all 315MHz LiftMaster and Elite gate operators, opening up the possibilities for builders and remodelers to upgrade current LiftMaster systems through an authorized dealer.
